There is no occasion for panic—Influenza has a very low percentage of fatalities, not over one death out of every four hundred cases, according to the N. C. Board of Health. The chief danger is in complications arising, attacking principally patients in a run-down condition—Those who don't go to bed soon enough, or those who get up too early.

THE TREATMENT.

Go to bed at the first symptoms, not only for your own sake, but to avoid spreading the disease to others—Take a purgative, eat plenty of nourishing food, remain perfectly quiet and don't worry. Quinine, Aspirin or Dover's Powder, etc., may be administered by the physician's directions to relieve the aching. But there is no cure or specific for influenza—the disease must run its course. Nature herself will throw off the attack if only you keep up your strength. The chief danger is in the complications which may arise. Influenza so weakens the bodily resistance that there is danger of pneumonia or bronchitis developing, and sometimes inflammation of the middle ear, or heart affections. For these reasons, it is very important that the patient remain in bed until his strength returns—stay in bed at least two days or more after
